How to Determine Rivet Size

Determine the factory part number from an Assembly Manual, or measure the range of parts that are to be assembled. Rivet length is measured from the underside of the head.

63-82 NOS Assembly Rivets

These have all the authentic features: Large 1/2" diameter flat head, 1/16" thick with concentric growth rings on the under side of the head only - not on top. They have proper tempered hardness Aluminum, which easily peens over without using excessive force. This softness allows the 5/8" long shaft to be shortened to any length required. Cut with the wire cutters on most needle nose pliers. During assembly over 200 were used on body. Limited supply available.

63-82 OEM Part #	Length	Grip Range
3828547	3/8"	.08" - .13"
3828548	7/16"	.14" - .19"
3828546 or 3831877	1/2"	.20" - .25"
3828549	9/16"	.26" - .31"
3828550	5/8"	.32" - .37"

Warning / Caveat Emptor

Brand X: this bogus rivet is extremely hard, and therefore it is virtually impossible to peen over without damaging the fiberglass.

Brand Y: has visible concentric rings on top of the head instead of the smooth top - dead give away.
